

Compressed Natural Gas is a smart deal in the long run, and an even better savings when Unleaded is over \$2.00 per gallon!

CNG Systems of Arizona

The Whitton Plumbing CNG Vehicle Fueling Equipment Division has a new name! Ownership, Phone, and address are still the same. Our new name is more simple and better reflects our purpose and service to Arizona.

FuelMaker Price Increase October 1st

All FuelMaker equipment orders after Oct 1st will reflect a 15% price increase. This will not affect service or repair parts. If you have an equipment order pending, it would be wise to get it finished before Oct 1st.

Phill Training

In August we had FuelMaker representatives down from Canada. FuelMaker trained our gas piping and installation technicians at the Whitton Plumbing training facility. We are now certified on the new Phill Home Fueling equipment.

Phill Testing

In September, we will be installing 3 Phill test units in homes in the Phoenix area.

Used FuelMaker Equipment

We have several used units available, FMQ2-36, 3600 Lbs and a FM4, 3000 Lbs. Call for hours, condition and price.

New Web Site!

We now have a new web site under construction:
www.CNGaz.com

CNG Home Fueling Requires 2nd Meter
Natural Gas used for motor fuel comes at a lower rate than gas used for residential use, Federal Excise Tax must also be collected for fuel used in a motor vehicle, thus requiring a 2nd meter.

CNG Systems Has The Equipment!

As the Phill model comes out, we now have equipment that can cover most needs! From small home units, to private and public card access stations. We can match everyone's needs with the right CNG equipment & storage for the job-

- FuelMaker fueling pumps & storage
- Xebec driers
- Ward card readers
- Fueling Technologies dispensers

Support the Clear Act!

The Clear Act provides tax credits for home and public CNG fuel stations, and dedicated AFV's. The Clear Act goes to conference in Congress in Sept. See our link page or- www.ngvc.org

David's Smart Tip- When Home Fueling Place a small orange cone on your vehicles hood whenever your fill hose is connected. This way, you always have a reminder before you back out.
